

# MBioLIMS, the complete, modular and evolutive LIMS for BioBanks

## DISCOVER OUR LABORATORY MANAGEMENT SOLUTION SPECIALLY DEVELOPED FOR BIOBANKS

The complexity of sample collection is increasing with the number of specimens collected as well as requirements from regulatory agencies. Keeping track of sample reception, processing and distribution can be very tedious without an adapted solution. MBioLIMS BioBanking delivers the power you need to efficiently manage your sample collection.

**COMPLETE** – MBioLIMS revolutionizes the management of your laboratory on a daily basis: from samples storage, high throughput experiments, project management, analysis tools, to sharing results in real-time.

**MODULAR** – a wide range of flexible modules available.

**EVOLUTIVE** – an evolutive and integrated solution that fits seamlessly and rapidly to the evolving requirements of your laboratory.

MBioLIMS® BioBanking solution's main functionalities include:

### Samples Collection

Define new studies (protocols, multiple time points & collection sites) · Samples packages reception (manual and excel import) · Print unique barcode for each sample · Patient information with informed consent and customizable fields · Regulatory compliance.

### Samples Processing

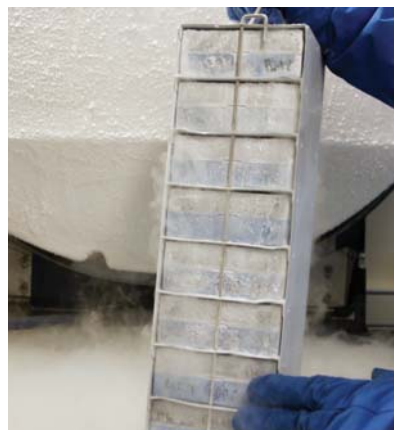

Aliquots, pooling, transformation with historical sample genealogy and traceability · Assign automatically/manually storage location · Integrate experiment result data.

### Samples Distribution

Record orders · Select samples for distribution based on complex criteria · Track expedition.
